

YOU – Stop Driving When:

a) Consume Too Much Alcohol or Under Drug Impairment

You feel drowsy, dizzy, or disoriented.

b) Medical Conditions

Certain health conditions can affect your motor skills, vision, or mental state.

c) Fatigue and Sleep Deprivation

Drowsy drivers can nod off, drift between lanes, or miss traffic signs.

d) Emotional or Mental Distress

Strong emotions like anger, sadness, anxiety, or grief can affect your concentration and decision-making.

e) Poor Vision or Hearing

Vision and hearing are crucial for driving. Always wear prescribed glasses or hearing aids when driving.

f) Without a Valid Driving License

It's against the law

Final Thought: Take responsibility

It's not worth the risk, putting your own life and others life in danger. Consider taking a taxi, ride-hailing app, public transport, or a trusted friend for peace of mind.

Driving is a privilege, not a right. A person license can be revoked for reckless or dangerous driving

REMEMBER: PREVENTION IS BETTER THAN CURE
